Resetting a Forgotten Password

Login and Account Security

Fictional training documentation for a local RAG demonstration.

Password reset

On the CloudDesk sign-in page, select Forgot password, enter the email address associated with the account, and follow the instructions sent to that inbox.

Email not received

Check spam or junk folders, confirm that the address was entered correctly, and wait a short period before requesting another message. If the account uses single sign-on, the user may need to reset the password through the organization's identity provider instead.

Expired reset link

A reset link may expire or become invalid after a newer request. Start again from Forgot password and use the newest message. Do not forward reset links to support.

Security practices

Support will never ask for the user's password or one-time code. Do not ask customers to email passwords. If the user suspects account compromise, follow the suspicious-login procedure.

Account not found

A message that does not identify an account may be used to protect account privacy. Ask the user to verify the sign-in email and organization rather than confirming private account information through an unverified channel.

Escalation

If reset messages still do not arrive after the basic checks, collect the sign-in email, approximate request time, organization, and whether the account uses SSO. Avoid collecting passwords or authentication codes.
