Managing Organization Settings

Account Administration

Fictional training documentation for a local RAG demonstration.

Settings access

Organization settings are available to authorized owners or administrators. The options shown may depend on the plan and assigned permissions.

Organization profile

Authorized users can review the organization name and profile fields in Settings. Before changing a shared name or domain, confirm that the change is intended for the whole organization.

Domain changes

If the organization needs to change a verified email domain or domain-based sign-in setting, use the approved verification process. Do not treat possession of an email address alone as sufficient proof of domain ownership.

Ownership changes

Ownership transfers can affect billing, access, and administrative responsibility. Follow the documented identity-verification and approval procedure rather than changing ownership based only on a ticket request.

Settings not visible

If a setting is missing, check the user's role, current plan, and organization context. If the documentation does not explain the setting, escalate with a screenshot that excludes sensitive information.

Safe change practice

Record the requested change, the authorized requester, and the confirmation shown by the product. For security-sensitive changes, follow the organization's approval process.
